NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. Gaps between the contigs.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          24-MAY-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   27 - MAY -
      The invention relates to a polynucleotide isolated from chromosome 11 of Indica rice cultivar CO39, flanked by marker R2316 and 861094 comprising one or more genes that confer resistance to strains of Magnaporthe grisea having avirulence gene AVR1-CO39. The Pi-CO39(1) polynucleotides are useful for conferring or improving resistance of plants to strains of the rice blast pathogen, Magnaporthe grisea and other pathogens. The Pi-CO39(1) nucleic acids may be used as probes to detect the presence of pure Pi-CO39(1) proteins. Purified gene products of Pi-CO39(1) proteins. Purified gene products of Pi-CO39(1) are useful in producing polyclonal or monoclonal artibodies useful as sensitive detection reagents for the presence and accumulation of Pi-CO39(1) compared to the presence and accumulation of Pi-CO39(1) compared in products of plants are useful for plant breeding or directly in agricultural or horitoultural applications. The present sequence is BAC clone K6936 from rice variety CO39.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        33831 GGAGATCGCCTTGGTACTCCATGTATTTAATGTATGACGTTGTTGACTTT 33772

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel nucleic acid of Arabidopsis thaliana comperising a sequence capable of hybridising under stringency to one of the 999 sequences referred to but not defined in the specification (ABQ85131-ABQ86129). The nucleic acid sequences are useful to identify homologous or related genes, to produce compositions that modulate expression or function of the encoded protein, to map functional regions of the protein, to study associated physiological pathways, to genetically manipulate cells and plants. The encoded products are useful to screen for biologically active agents such as fungicides or insecticides and to elucidate biochemical pathways.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1334 AAGATTTGCAGGTGCGAGATCACTCTTTCACCAAGCGCCACGGCGTCATCCGCGCCGAG 1393

                                                                                                                                                                                                                                                                                                                       \tilde{Q}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       inducible expression of an associated nucleotide sequence. Also
included are the RCI-1 cDNA, its encoded protein, a 4.5kb genomic clone
for the lipoxygenase gene, promoter fragments, the lipoxygenase transit
peptide which directs expressed proteins to the plastid, a vector
comprising the promoter or fragments and a transgenic plant comprising
the vector. The promoter or fragments are useful for expressing a
nucleotide sequence of interest. The transit peptide is useful for
targeting an associated protein of interest to plastids. A nucleic acid
which expresses polypeptide having lipoxygenase activity is useful for
inhibiting fungal mycotoxins when transformed into a plant. The
lipoxygenase is useful for inhibiting fungal mycotoxins. The promoter is
useful for regulating transcription of a chemically inducible but not
wound or pathogen inducible gene, which involves applying a chemical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ōţ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid molecule (a promoter rice chemically induced cDNA (RCI-1), which encodes a lipoxygenase) capable of driving chemically-inducible but not wound or pathogen-

3
regulator to a plant or seed containing a chemically regulatable nucleotide sequence. Transgenic plants as described above are useful for breeding improved plant lines that for example increases the effectiveness of conventional methods such as herbicide or pesticide treatment or allow to dispense with the methods due to their modified genetic properties. New crops with improved stress tolerance can be obtained that, due to their petinised genetic equipment yield harvested product of better quality than products that were not able to tolerate comparable adverse developmental conditions. The present sequence is the 4.5kb
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1016

                                                                                                                                                                                                                                                                              The invention relates to nucleic acids (1) that hybridise under stringent conditions to any of 999 sequences (ABQ6444-ABQ6642) or their fragments. (1) are used to express the corresponding polypeptides (II) or to produce genetically modified plant cells or transgenic plants, which may have improved resistance to disease or stress, or altered metabolic/blosynthetic pathways (for production of commercial, nutritional or medicinal products), or generally any trait of interest, or can be used to screen for biologically active agents (e.g. fungicides, insecticides and antibiotics).

This invention relates to a sakuranetin synthetase gene encoding a protein with naringenin 7-0-methyltransferase (NOMT) sctivity and promoter activity. The invention includes a recombinant vector including the sakuranetin synthetase DNA and host cells transformed with the vector. The sakuranetin synthetase protein has antibacterial activity and is used to produce transpenic plants with antibacterial characteristics. The present sequence represents the sakuranetin synthetase gene of the

                                                                                                                                                                                                                                                                                              The sequence is that of the MLO gene, wild-type Mlo exerts a negative regulatory function on a pathogen defence response, such that mutants exhibit a defence response in the absence of pathogen. Down-regulation or out-competition of Mlo function may be used to stimulate a defence response in transgenic plants conferring increased pathogen resistance, especially resistance to powdery mildew or rust. The product can also hee used for identifying compounds able to stimulate a defence response in a plant by interaction with encoded polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1911 CCTCCAPCTCTAAATATTTTGACGCGGTTGACTTTTTTTAAATATGTTTGACCATTCGTCTT 1970

```
The invention relates to gcpE nucleic acid molecule, an essential gene of methyl-D-erythritol phosphate (MEP) pathway) that encodes rice, Arabidopsis thallana or Escherichia coll GCPE protein. gcpE is useful for producing a transgenic plant such as Brassica campestris, B. napus, canola, castor bean, coconut, cotton, crambe, linseed, maize, mustard, oil palm, peanut, rapessed, rice, safilower, seasane, soybean, sunflower, or wheat with an increased isopremoid (tocopherol) compound level. The expression of GCPE protein in organisms increases the level of tocopherol substrate such as isopermy diphosphate and dimethylallyl diphosphate bhosynthesis. Transgenic organisms overexpressing GCPE protein in transgenic organisms overexpressing GCPE protein in transgenic plant may provide tolerance to stresses e.g., oxidative stress tolerance such as to oxygen or ozone, UV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       16638 AAIGGTCAAACAIGTGCTAAAAGTTAACGGTGTAAAATATTTAGAAACGGAGGAAGTAI 16579
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            the same species, and to obtain nucleic acid homologues. gopf is also used as or primers. The recombinant vectors are used in plant transformation or transfection. gopf an also act as markers capable of detecting polymorphisms such as single nucleotide polymorphisms (SNFS). gopE is also used to determine the level or pattern of expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                16698 AATATACTTTTATGTATACATATAGTTTTATATTTTCACAAAATTTTTGAATAAGATG 16639
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gops nucleic acid which is an essential gene of the methyl-D-erythritol phosphate pathway, encoding a fully defined GCPE protein which is useful for increasing levels of tocopherol substrates in plants -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          16757 GTCTTATICAAAAATTIAAATAAGTATTATTT-TTTTCCTATCATTGATTCATTGTTA 16699

The invention relates to a polynucleotide isolated from chromosome 11 of Indica rice cultivar CO39, flanked by marker R2316 and RG1094 comprising one or more genes that confer resistance to strains of Magnaporthe grisea having avirulence gene AVR1-CO39. The P1-CO39(t) polynucleotides are useful for conferring or improving resistance of plants to strains of the rice blast pathogen, Magnaporthe grisea and other pathogens. The P1-CO39(t) nucleic acids may be used as probes to detect the presence of p1-CO39(t) nucleic acids may be used as probes to detect the presence of our P1-CO39(t) proteins. Purified gene products of P1-CO39(t) are useful in producing polyclonal or monoclonal antibodies useful as sensitive detection reagents for the presence and accumulation of P1-CO39(t) polypeptides. The transgenic plants are useful for plant breeding or directly in agricultural or hortcultural apphications. The present sequence is BAC clone E2P5 from rice variety CO39.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       65529 cercegreceraararrigaegecerraacririraaararargrigaregriegrer 65470

Novel isolated nucleic acid encoding a promoter which is capable of driving chemically inducible but not wound or pathogen-inducible expression of an associated nucleotide sequence Claim 3; Page 68-69; 88pp; English.

the vector. The promoter of fragments are useful for expressing a nucleotide sequence of interest. The transit peptide is useful for targeting an associated protein of interest to plastids. A nucleic acid which expresses polypeptide having lipoxygenase activity is useful for inhibiting fungal mycotoxins when transformed into a plant. The promoter is useful for requiating transcription of a chemically inducible but not wound or pathogen inducible gene, which involves applying a chemical regulator to a plant or seed containing a chemically inducible but not nucleotide sequence. Transgenic plants as described above are useful for breeding improved plant lines that for example increase the effectiveness of conventional methods such as herbicide or pesticide treatment or allow to dispense with the methods due to their modified genetic properties. New crops with improved stress tolerance can be obtained that, due to invention relates to an isolated nucleic acid molecule (a promoter of rice chemically induced cDNA (RCI-1), which encodes a lipoxygenase) expable of driving chemically-inducible but not wound or pathogen-inducible expression of an associated nucleotide sequence. Also included are the RCI-1 cDNA, its encoded protein, a 4.5kb genomic clone for the lipoxygenase gene, promoter fragments, the lipoxygenase transit peptide which directs expressed proteins to the plastid, a vector comprising the promoter or fragments and a transgenic plant comprising their optimised genetic equipment yield harvested product of better quality than products that were not able to tolerate comparable adverse developmental conditions. The present sequence is the 4.5kb fragment of the RCI-1 gene from plasmid pBSK+LOX4a.

The Pi-C039(t) polynucleotides are useful for conferring or improving resistance of plants to strains of the rice blast pathogen, Magnaporthe grisea and other pathogens. The Pi-C039(t) nucleic acids may be used as probes to detect the presence of and/or expression of Pi-C039(t) genes, and to produce large quantities of

     pure Pi-C039(t) proteins. Purified gene products of Pi-C039(t) are useful in producing polyclonal or monoclonal antibodies useful as sensitive detection reagents for the presence and accumulation of Pi-C039(t) polypeptides. The transgenic plants are useful for plant breeding or directly in agricultural or hortkoultural applications. The present sequence is BAC clone K6P36 from rice variety C039.

                                                                                                                                                            The present sequence, Pr-10c, is a pathogen inducible regulatory element. It was identified by screening a Co39 rice seedling aconic cos9 library with a cDNa clone, MAG-7 of a gene whose transcripts appeared in cos9 rice seedlings 72 hours after incoulation with Magnaporthe grisea. Induced expression of the Pr-10c gene was not detected after infection with M. grisea throughout a 144 hour time period. The Pr-10c sequence is used to make a novel plant expression vector comprising a pathogen-inducible regulatory element and a core promoter, where the regulatory element is selected from three rice genomic DNA sequences AMI93778-80. The vectors are used for increasing the disease resistance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  958 CATCAAATATTTTTAAGCATGACATAAACATTTTCATATTTGCAAAA-----AAAAA 1010

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ద
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δy
                                                                                                                                                                                                                                                                                                                                  genome of rice, three times larger than that of Arabidopsis, makes it suitable for genomic studies. In order to facilitate positional cloning, physical mapping and genome sequencing of rice, we have constructed a BAC library from Oryza sativa, Nipponbare variety. The library from Oryza sativa, Nipponbare variety. The library contains 36,864 clones with an average insert size of 128.5 KD providing 10.9 haploid genome equivalents. The deep coverage allows the isolation a particular sequence with a probability of 99.9 %. Two high density filters, each containing 18,432 clones (doubly spotted), represent the whole library for colony screening."
